

Cybersecurity Myths You HAVE Heard: Myth-Busted Edition

MYTH: "I'm Too Small to Be a Target."

FACT: Small businesses are prime targets for cyberattacks. Hackers see them as easier targets with valuable data.

MYTH: "Antivirus Software Provides Total Protection."

FACT: Antivirus is essential but not foolproof. It can't catch all threats, especially zero-day and living-off-the-land (LoL) attacks.

→ CYBERSECURITY MYTHS YOU HAVE HEARD: MYTH-BUSTED EDITION

MYTH: “Only IT Teams Need Cybersecurity Training.”

FACT: Everyone in the organization should undergo cybersecurity training to avoid falling for scams such as phishing.

MYTH: “My Password is Strong Enough.”

FACT: Strong passwords are essential, but multi-factor authentication adds an extra layer of security.

MYTH: “I Don’t Click on Suspicious Links.”

FACT: Cybercriminals are clever. Sometimes, even legitimate-looking links can lead to malware.

MYTH: “Cyber Insurance Means I’m Safe.”

FACT: Cyber insurance often has exclusions. Robust security measures are still essential.

MYTH: “Cybersecurity is Just an IT Issue.”

FACT: Cybersecurity is everyone’s responsibility. A culture of security is crucial for protection.
