

CYBERSAFE SOLUTIONS

24/7/365 Network Monitoring

Hackers Are Working 24/7 Your Security Team Should Be Too

24/7/365 Fully Managed Network Security Monitoring

Cybersafe Solutions monitors your networks in real-time. We use advanced behavioral analytics to proactively identify threats, discover and track all assets, and scan for vulnerabilities. We also provide intrusion detection and SIEM log-monitoring.

Cybersafe Network Monitoring

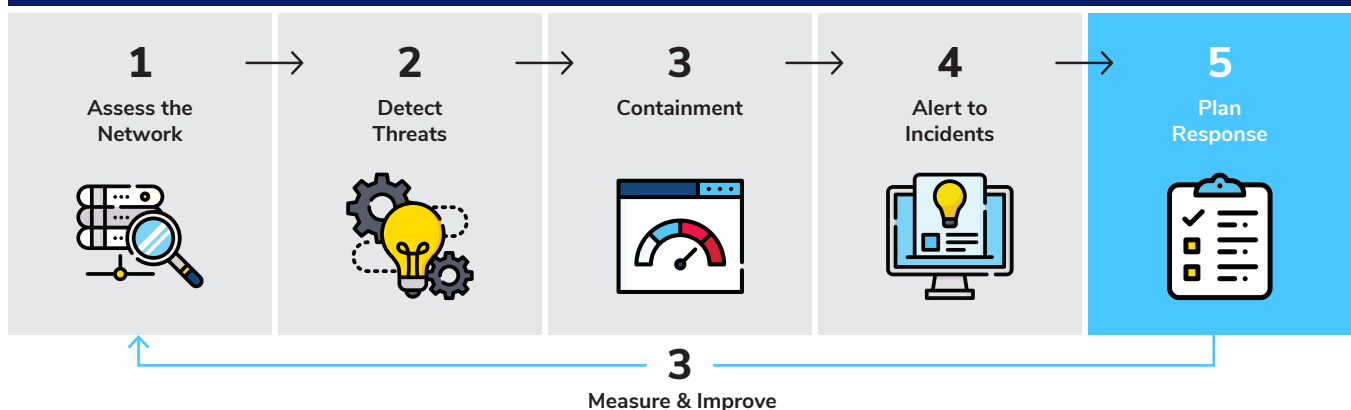

- Proactively monitors your networks, 24/7/365
- Transfers complex and time-consuming cybersecurity tasks from your internal resources to our team of experts
- Protects against new and emerging threats
- Utilizes state-of-the-art security technologies and processes
- Leverages data from dozens of global threat intelligence sources to better protect your infrastructure
- Provides analysis from highly-skilled, seasoned cybersecurity professionals

Cybersafe's Network Security Monitoring Service increases regulatory compliance and simplifies auditing for your organization.

Partner with an MSSP that has the security knowledge, skills, and ability to monitor and protect your environment. For more information call: (800) 897-CYBER (2923)

CYBERSAFE SECURITY MONITORING PLATFORM

Cybersafe Network Security Monitoring Features And Offerings

Cybersafe unifies 5 essential security tools into one integrated solution powered by a global threat intelligence network.

Asset Discovery & Inventory

Find all assets on your network before a bad actor does with active and passive network discovery.

Vulnerability Assessment

Identify systems that are vulnerable to exploits with active network scanning & continuous vulnerability monitoring.

Intrusion Detection

Detect known threats and attack patterns targeting your assets. Cybersafe monitors your on-premise and cloud networks looking for signs of attack, compromise, and other exposures.

Behavioral Monitoring

Instantly spot suspicious network behavior with NetFlow analysis, service monitoring, and deep packet analysis.

SIEM & Log Management

Quickly correlate & analyze security event data from across your network with built-in SIEM & log management.

Cybersafe Solutions Network Security Monitoring platform delivers all of the essential security capabilities you need to be ready for your audit— instantly. Building in the essential security capabilities saves you time and money.

CYBERSAFE NETWORK SECURITY MONITORING DELIVERS

- Valuable insight into who and what is running on your systems
- Monitoring of your assets residing within your cloud provider
- Monitoring of third-parties who are accessing your systems
- Unparalleled cybersecurity expertise
- Proactive identification of system vulnerabilities
- Reduced time to threat detection
- Capabilities beyond what most regulatory protocol suggestions for monitoring, documentation and internal reporting
- Threat containment and eradication BEFORE they cause liability issues or harm your infrastructure

Access Cybersafe's senior-level security experts with 20+ years of experience and a state-of-the-art Security Operations Center.
