Services & Expertise

Choose from Cybersafe's comprehensive security programs that protect your endpoints by detecting and responding to advanced threats and attacks. Our programs are serviced by seasoned cyber professionals with extensive experience and knowledge in cybersecurity.

SOL XDR

Proactively monitor networks and endpoints in real-time, 24/7/365. Gain valuable insight into an environment while accelerating threat detection and reducing cyber risk with better compliance.

SOL SIEM

Monitor networks in real-time to proactively identify threats, discover and track all assets, and scan for vulnerabilities.

SOL EDR

Instantly detect endpoint intrusions, then respond and isolate threats within seconds of discovery. Terminate ongoing attacks before data is exfiltrated, assets are further compromised, or irreversible damage is done.

Threat Hunt - Compromise Assessment

A proactive approach to tracking down undetected threats, malware, and adversaries, enabling organizations to rapidly assess endpoints for evidence of compromise, including elusive root-kits and back doors.

Investigations & Incident Response

Our team of certified forensic and incident response experts has the knowledge to perform remote investigations across thousands of systems.

SOL Training & Simulated Phishing Tests

This integrated platform for security training and simulated phishing attacks enables organizations to educate and test an entire user base on modern and evolving cyber risks.

Penetration Testing

Identify security vulnerabilities present in organizations' perimeter or network by performing simulated attacks in order to evaluate the security weaknesses and gaps.

Risk Assessments

Identify risks and provide specific tactical countermeasures to maximize cybersecurity by developing and initiating a plan that protects systems and sensitive data.

Security Policy Development

Provide a documented framework for an organization's cyber strategy. Create effective administrative, technical, and physical protocols to reduce the risk of cyberattacks.

SOL Dark Web

Utilizing specialized software, Cybersafe Solutions scans the dark web and sends instant alerts when a threat of stolen and compromised data is detected, allowing for immediate remediation and response.

Security Control Validation

Breach & Attack Simulation leverages hackers' tactics to validate controls, uncover security gaps, and provide mitigation recommendations.
